ISGOTT6 Ship/Shore Safety Check List: Mandatory & More extensive

As part of the updated ISGOTT6 standard the Ship/Shore Safety Checklist and pre-arrival information exchange has become mandatory and more extensive. This impacts how vessels and terminals should interact.

Mandatory

Safety critical

- A terminal is required to document safety checks & operational agreements via the Ship Shore Safety Checklist (SSSCL)
- As of ISGOTT 6 pre-arrival information exchange is required!
- Pre-arrival information exchange covers a part of the SSSCL and needs to be finished before the vessel berths. This creates a need to digitize this process.
- Pre-transfer conference between ship's rep and terminal rep to formalize agreements related to ops and safety of loading/discharging
- Additional requirements lead to increased administration and documentation requirements

“Paper” Process is risky, time consuming and stressful

There is a lot of pressure on terminal operators to reduce the turn-around time of vessels. Coordination of operations when the ship is at the berth is vital. As the process at most terminals is still not digitized, there is a huge risk of human errors. In case of errors, the impact can be great with potential delays or safety incidents occurring.

- User unfriendly paper-based or digital form-based systems
- Sensitive to human error and handwriting issues
- Time consuming due to manual inputting of terminal and vessel data
- Multiple parties involved makes process complicated
- Filing of related documentation poses challenges

Solution: TankTerminals.com's SSSCL System

Our system digitizes the whole SSSCL and pre-arrival information exchange to make it more efficient, less prone to human errors and easy to operate. Furthermore, an integrated document management and communication system makes filing of related documentation much easier to achieve.

Main features & benefits

- VCT / Q88 integration
 - Terminal Configuration
- } inputting vessel / terminal data becomes quick and easy
- Digital workflow management: coordination before arrival and before operations decreases turn-around-time and reduces chance of error
 - Document management system: digital file of important documents

Launching Customer Offer

Special offer for our launching customers

Opportunity to integrate your requirements in new system

Favorable commercial terms:

- No set-up costs
- 50% of competitor's annual subscription price

Exit clause: if not to your satisfaction you can walk away without any costs attached.
